BACKGROUND

BPO is a unique type of business in which a BPO organization acts as an extension of its client’s department. This requires extensive understanding of different systems and processes that may be running at the client’s premises. Moreover, the same organization also needs to understand the legal and social requirements of the area where the client operates. Contrary to that, in Pakistan, each year, more than 205,000 students appear for different accounting degree / diploma examinations and certifications but only 10,000 qualify as professionals and this leaves a huge gap between ongoing business demand and adequately trained professionals for both domestic and international markets. The planned training includes Systems, Processes, Inventory Management, in an overall environment that also focuses on hands-on training. We are confident that, through these programs, we will be able to produce,

- trained professionals with potential to serve as managers who have understanding of the concepts related to different types of systems, management and control, interdependence and the positive or negative outcome of their actions or inactions.
- trained Inventory Control Managers with a theoretical and practical experience to apply Inventory Management tools and techniques in a variety of business environments.
- Accounting and Finance professionals to generate products for real domestic and international businesses.
- professionals who potentially have a positive contagion effect on peers and others in an organization rather than creating bottlenecks or adversely affecting others performance due to inexperience.
- Soft Business Environment (Pakistan, US and others, as needed)
